

PayProSys — Overview

Concept summary and simple wireframes (not pixel-perfect screenshots).
Companion to the plain-text business overview in `BUSINESS_REQUIREMENTS.txt`.

Note: This pack summarizes what the demo product solves—companies uploading payroll spreadsheets for their bank’s workflow—with pending vs submitted batches. Security and hosting are deliberately simple so the *workflow* is easy to judge.

A. Screen flow (wireframes)

These sketches mirror the actual app navigation: sidebar, upload area, batches, and employee payments.

1. Sign-in

PayProSys

Email + password

Email

Password

Sign in

Portal users authenticate; their role decides bank vs corporate menus.

2. Company user — Payroll upload & batches

Dashboard

Payroll Upload

Employee Payments

Upload payroll (Excel)

Month picker

Choose file

Upload

Batches

Month	Status	File	Submit	Delete	...
2025-03	PENDING	payroll.xlsx	[Submit]	[Delete]	
2025-02	SUBMITTED	feb.xlsx	—	—	—

Each file becomes a batch. Pending → submit or delete. Submitted → bank-visible; delete disabled.

3. Company user — Employee payments

Employee Payments

Pending

Submitted

Batch list • “View payments” opens line items

Table: batches + View payments ...

Separate from upload; corporates toggle pending vs submitted. Banks use the same concept but only see submitted work.

4. Bank user — Submitted batches

Employee Payments

Submitted payroll (your corporates)

Corporate name | Month | File | Records | View payments

Acme Ltd | 2025-03 | payroll.xlsx | 12 | ...

Bank staff see only batches the corporate has submitted; they can drill into payout lines.

B. Business overview (plain English)

Same content as BUSINESS_REQUIREMENTS.txt.

PayProSys — What the system does

- Banks work with **companies** (called corporates here). Those companies upload **employee payroll** from spreadsheets so the bank can see what needs to be paid.
- **Portal users** log in. **Employees on the spreadsheet** are not separate accounts—they are rows in the file.

Who does what — big picture

- **Super Admin (platform)** — Sets up banks; can view users across the system when helpful.
- **Bank** — Bank Admin and Bank User only see corporates that belong to *their* bank; they help onboard companies and bank-side users.
- **Corporate** — Corporate Admin and Corporate User work for one company: upload payroll and manage batches and payments for that company only.

Signing in

- Email and password.
- A **role** (Super Admin, Bank Admin, Bank User, Corporate Admin, Corporate User) controls menus and visibility.
- The demo intentionally keeps passwords and hosting simple—not production-grade security.

Super Admin

- Create and manage banks.
- Open a Users list for supporting or narrating demos.
- Not tied to a single bank/corporate for daily payroll tasks.

Bank

- See only corporates linked to their bank.
- Bank Admin can create a corporate (+ corporate admin) and manage bank-side users.
- Bank User has a similar corporates view; less “full setup” than Bank Admin.

Corporate

- Corporate Admin may add Corporate User accounts at the same company.
- Everyone on the corporate side sees only their own company.

Payroll upload (spreadsheet)

- Excel **.xlsx**.
- Expected columns include employee name, account number, joining date, ID, amount, and what the payment is for (salary, reimbursement, etc.). A sample sheet ships with the repo.
- User picks **which month** the payroll is for.

Batches — submit and delete

- Each upload creates a **batch**.
- New batches are **pending**: the company may **submit** or **delete**.
- After **submit**, batches are final for banks; the corporate **cannot delete** them anymore.
- **Banks only see submitted batches**. Pending stays internal.

Employee payments

- Dedicated menu, separate from upload.
- For corporates: **Pending** vs **Submitted** batches; open payment lines.
- For banks: submitted batches for their corporates, with payout lines.

Not in scope for this demo

- Formal approvals, reviewer vs operator, activation email, MFA, production security posture.

Honest limits

- No uptime or SLA commitments.
- Walkthrough / concept validation—not a finished bank-grade product.

Step-by-step demo script for live walkthroughs: see **DEMO_AND_USER_GUIDE.md**.
